

## **PRESS RELEASE**

### **World Renewable Energy Congress – X, Glasgow, Scotland, 19-25 July 2008**

The world renewable energy conference is a unique occasion bringing experts and interested parties from around the world, with the common aim of achieving global sustainable development. The subjects cover a variety of disciplines including energy policy, low energy architecture, all renewable energy technologies from small scale solar panels in Africa to wave machines in the North Sea, and the social and gender issues of investing in appropriate renewable technologies in developing economies.

The variety of subjects and international perspectives from 1000 delegates make this an excellent venue to network, share ideas, and get an understanding of what is happening in other countries and related fields, and finally to be inspired.

Papers are invited on any of the subjects relevant to aims of the conference, and delegates are most welcome to join in the event.

Ali Sayigh – Chairman
